IT Network Guide v2

Corporate network access, VPN configuration, and Wi-Fi setup

Version	v2.0
Document Type	Corporate Policy
Classification	Internal
Owner	Enterprise Knowledge Assistant
Effective Date	January 2026

Section 2: VPN Configuration

- macOS setup:
- 1. Install Cisco AnyConnect Secure Mobility Client from the IT Self-Service Portal.
- 2. Open AnyConnect from Applications.
- 3. Enter vpn.company.com as the host address.
- 4. Sign in with corporate credentials (employee_id@company.com).
- 5. Enter 2FA token from Microsoft Authenticator app.
- 6. Once connected, you will receive a 10.x.x.x internal IP address.

Windows Setup

- Same Cisco AnyConnect client as macOS.
- Auto-launches on startup if configured in Settings.
- Login credentials are cached for 24 hours.
- Re-authentication required after sleep/wake.

Linux Setup

- Use openconnect CLI: sudo openconnect vpn.company.com
- Provide corporate credentials when prompted.
- 2FA token required after password.
- For Ubuntu/Debian, install via: sudo apt install openconnect.

Troubleshooting

- If MFA fails: re-register Microsoft Authenticator via IT Portal.
- If connection drops: check firewall allows UDP 443 and UDP 500.
- If DNS resolution fails: flush DNS (ipconfig /flushdns on Windows).
- Contact IT desk: ext. 4500 or it@company.com.
